### DETAILED ACTION

This action is in response to Applicant's Special Amendment filed on 06/15/2010. Previously rejected **claims 1-4 and 7** have been cancelled, leaving only the previously **allowable claims 5 and 6** for consideration. **Claims 5 and 6** are now pending in the present application.

#### *Allowable Subject Matter*

**Claims 5 and 6** were previously modified to overcome the objections raised in the non-final office action dated 03/14/2007, and are therefore deemed allowable.

The following is a statement of reasons for the indication of allowable subject matter:

Consider **claim 5**, the best prior art found during the examination of the present application, **Ozaki et al. (U.S. Patent Application Publication # 2004/0071148 A1)** in view of **Gloe (US Patent Application Publication 2004/0083306 A1)**, fails to specifically disclose the limitation of generating by the router, for an IPv6 aggregatable unicast global address, an SLA value of least significant 16 bits different from SLA values of least significant 16 bits of all position identifier portions registered in said routing table, said position identifier portions having most significant 48 bits identical with most significant 48 bits assigned to the router, and generates said position identifier portion by combining the SLA value with the most significant 48 bits.

Consider **claim 6**, the best prior art found during the examination of the present application, **Ozaki et al. (U.S. Patent Application Publication # 2004/0071148 A1)** in view of **Gloe (US Patent Application Publication 2004/0083306 A1)**, fails to specifically disclose the limitation of generating by the router, for an IPv6 site-local address, said position identifier portion generating unit generates a subnet ID of least significant 16 bits different from subnet IDs of least significant 16 bits of all position identifier portions registered in said routing table, said position identifier portions having most significant 48 bits identical with most significant 48 bits set fixedly, and generates said position identifier portion by combining the subnet ID with the most significant 48 bits.
